2 The Cult of the Machine

In the 41st Millennium, it is said that the mighty Imperium of Mankind spans a million worlds. The Emperor-God's vast fleets and armies, composed of billions of men, wage an unending war against xenos, traitors, and heretics, from the Halo Stars to the galactic core. The Imperium itself is a grim and unyielding authority in which any form of autonomy is a great privilege. Within the Administratum of the Adeptus Terra, departments exist to supervise, watch, and control the countless souls of the Imperial domain. Ten thousand years of civil wars, heresies, pogroms, and coups have created a bureaucracy that is extremely wary of the dangers of granting too much independence to its citizens, whether Planetary Governors or mere serfs.

There is, however, one organisation in the Imperium that stands apart and is practically independent of the Adeptus Terra. The red-robed agents of this organisation appear on every Imperial world and aboard every one of its ships. It possesses entire worlds under its sole authority, controls practically every installation the Imperium needs to wage war, and yet retains unprecedented autonomy and power. That organisation is the Adeptus Mechanicus, and its history is as long and tumultuous as that of the Imperium.

In an age when so much knowledge was lost, it is the Adeptus Mechanicus that provides the Imperium with its technical expertise. The Tech-Priests manufacture and maintain a myriad of essential machines, from the most powerful plasma reactors to the humblest vox, and even the Golden Throne. The Tech-Priests are those who preserve the knowledge of past ages. By Imperial decree, every new discovery belongs to the Tech-Priests, whether a recovered strongbox or a rediscovered starship.

The Adeptus Mechanicus's authority in matters of technology is unquestioned. The ordinary Imperial citizen would consider it sacrilege to misuse a machine deliberately, and believes that departing from the prescribed rites of maintenance leads to discord with a machine's wrathful spirit. The Tech-augurs of the Adeptus Mechanicus are present in every fleet and every expeditionary force, while the Tech-Priests tend the essential machines of the Imperium on every world and every vessel. The Forge Worlds have become essential centres of manufacture and trade for entire sectors of space. The Adeptus Mechanicus's legions of war machines are fully maintained and committed to the punishment of Humanity's enemies. Even the mighty Adeptus Astartes send their own to Mars to learn the secrets of the Machine and train as Techmarines. Without the Adeptus Mechanicus, the Imperium would doubtless collapse.

Perhaps because of that very importance, some of the Adeptus Mechanicus's autonomy eroded gradually over the millennia. The events of the Horus Heresy and the convulsions that followed in the Imperium have subjected the Forge Worlds to inquisitorial scrutiny at a level unimaginable since the earliest days of the Treaty of Olympus. Fear of accusations of heresy has limited the safe exchange of ideas. True knowledge was gradually replaced by rote learning and understanding by dogma.

In hidden places, far from the rigours of the Mechanicum, some hold that the Cult of the Machine's greatest heresy is to consider that only the oldest technology is worthy of study and use. The Tech-Priests continue to analyse, catalogue, and examine every fragment they find, but in the rare cases where they discover an example of innovation, it is often dangerous to its operators. The Cult Mechanicus treats every form of innovation with supreme scepticism, and some claim that knowledge of the machine has been supplanted by mere worship of its function. As a result, with the exception of a few notable individuals, there are few Tech-Priests in the 41st Millennium who can approach the technical genius of their predecessors. With each century, a little more of the technological lore accumulated by Humanity passes beyond understanding and becomes myth and legend.

Thanks to the Cult Mechanicus, the Imperium's war machines are able to fight simultaneously on a million planets. The number of the Omnissiah's faithful is incalculable, and its mastery of machines is felt in every armed force of Humanity, from remote garrisons to the legions of divine machines.

A great part of the weapons used by the Imperium's regular armies originates from an Adeptus Mechanicus Forge World. Only with the Omnissiah's assent do thousands of Astra Militarum tank squadrons tread the battlefields, Imperial Navy armadas carry crusade armies across the stars, and Adeptus Astartes strike forces fall from the heavens sowing death. Even the Emperor owes his survival only to the knowledge of the Adeptus Mechanicus, for the Tech-Priests alone know the secrets of the Golden Throne. They are aware of the vital place they occupy within the Imperium, yet they reserve for themselves the privilege of wielding the most devastating weapons, studying the most unfathomable mysteries, and committing the most atrocious acts.

More than a vital organ of Humanity's galactic empire, the Cult Mechanicus obeys its own creed, older than the Imperium itself. During the ages when Mars was cut off from Terra by supernatural storms, its technocrats came to worship technology. Despite the ravages of ten thousand years of war, their unshakeable faith has allowed them to survive. It is that faith that ensures the power of the Omnissiah's armies, and that instils in them a religious fervour that crackles literally upon the bodies of warriors and machines.

3 Special Rules

3.1 Machine God

Any detachment within 45 cm of a Titan or an Ordinatus (not Minoris) from its army may reroll failed Morale tests. If a Titan or an Ordinatus (not Minoris) is destroyed, all detachments within 30 cm of the Titan or Ordinatus must take a Morale test immediately.

3.2 Allies

You may take up to 25% allies from the Imperial Knights or Titan Legions codex.

4 Special Abilities

4.1 Master Calculator

Once per turn, for each base with this ability, choose one of the three effects below:

4.1.1 Trajectory Calculation

Choose a single detachment within 45 cm of the base with the Master Calculator ability during the target detachment's activation in the Movement Phase. The detachment may use the Master Calculator's line of sight to make its artillery shots. In addition it may reroll the dice it wishes on a Titan or Praetorian hit-location table.

4.1.2 Structural Weakness

Choose a building in line of sight of the base with the Master Calculator ability during its activation. Successful save rolls for the building caused by shots from your army may be rerolled.

4.1.3 Adaptation

The base gains the Tactical Genius ability for the turn.

4.2 Versatile

A base with this ability must choose at the start of the turn (on its activation in the Movement Phase) whether it will have the Mechanic or Medic ability for that turn.

4.3 Artisan

A base with this ability acts as a Medic and a Mechanic for Myrmidon, Servitor, and Kataphron bases.

4.4 Plasma Weapons

Because these weapons use a large amount of energy, only one Plasma weapon is allowed per titan.

4.5 Devotion Bell

All Daemons within 25 cm have a -2 penalty to their Instability tests. In addition, no base within 25 cm may receive or use Chaos Reward cards.

4.6 Ursus Claw

A weapon with this ability reduces the AF of one target (and only one) in contact by 3.

4.7 Harpoon Missile

If the Harpoon Missile hits its target and the target fails its armour save, it remains lodged. While it is lodged, its target suffers a penalty of 3 to AF and a penalty of 1 to To-Hit with all its weapons. In addition to the initial damage, it causes a damage during End-of-Turn Effects while it is lodged. After causing this damage, it dislodges on a 4+ on the first turn it is lodged, 3+ on the second, and 2+ on subsequent turns.

4.8 Volkite Deflagration

When a base with this ability shoots, draw a single imaginary line from the base to the aimed point. All bases crossed by that line are hit, whether the centre is hit or not.

These weapons cannot make Intercept Fire. For a structure, half of the bases present in garrison are hit. Due to its nature, it stops at the first structure it encounters as well as the first class 5 or higher obstacle.

4.9 Reconnaissance Land Speeder

The Land Speeder is a separate detachment and need not maintain detachment coherency with the titan. If the Titan is destroyed, the Land Speeder is removed from the table. The Land Speeder cannot capture objectives.

4.10 Crash

When the Landing Craft is destroyed at Altitude it crashes. It then scatters 2D6 cm from its arrival point, and acts as a Titan falling. If that is the case, the embarked troops lose all their shields. After that, the bases suffer a hit with AP -2 for each Wound they have. If they survive they may exit normally from the wreck of the vessel.

4.11 Vortex Missile

The Vortex Missile uses a Template (7.5 cm) which, once placed, scatters 3D6 cm. The Vortex Missile does not hit targets at Altitude. It cannot make Intercept Fire. Any base hit by the template (even if the centre is not under the template) suffers the effects of the Vortex Missile. If the target has shields, the vortex may destroy them. The target immediately loses 2D3 Energy Shields and Energy Fields, or 1D3 Deflector Shields and Organic Metal (with no Psychic Save linked to these protections).

Bases that passed their Psychic Save or that still have active shields suffer no damage. All bases are pushed to the edge of the template.

All bases hit suffer 1D3 hits that are Psychic Attacks, and structures are hit by a Damages Buildings (AP $-5/3$) attack.

During End-of-Turn Effects, the vortex disappears on a 5+. If it remains in play, it may be activated in the Combat Phase and then scatters 3D6 cm, hitting everything in its path.

4.12 Landing Craft

Landing Craft follow the following arrival rules:

- During the Off-Table Arrival phase, the arrival point is determined as with any other off-table arrival.
- The vessel arrives in the Movement Phase, and it may suffer Intercept Fire. The vessel is considered to be at Altitude above the arrival point for range and line of sight.
- If the vessel survives, it lands and the embarked troops then exit as from a transport. Once on the ground, the vessel can no longer move for the rest of the battle.

A Landing Craft may transport 60 points as follows. A Heavy Titan costs 60 points, a Warlord, Psi-Titan Warlord, or Warmaster costs 30 points, a Reaver or Warbringer costs 20 points, a Scout Titan costs 15 points, a Super-heavy costs 10 points, a Knight costs 5 points, a vehicle costs 3 points, a Walker or Cavalry costs 2 points, and an infantry base costs 1 point.

4.13 Hellbore Emergence

When the tunneler surfaces, the ground around it is transformed into molten slag. To represent this, place a Template (12 cm) on the tunneler's exit point. All bases under the template are hit on 3+ with AP -1 . Surviving bases are placed on the edges of the template, as close as possible to their original positions.

5 Unit Profiles

Name	Movement	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP	Weapon Abilities
<i>Infantry (1)</i>										
Artisan	10 cm	5+	+1	Attached	Graviton Pistol	20 cm	1	Graviton	−1	Graviton

7 Hit Location Sheets

7.1 Warhound / Reaver / Warbringer / Warlord

D6	Location Front / Rear
1	Legs
2	Hull
3	Weapon
4	Head (front) / Reactor (rear)
5	Shield Generator
6	Player's choice

7.2 Ordinatus Majoris

D6	Location Front / Rear
1	Tracks
2	Hull
3-4	Majoris Weapon
5	Bridge (front) / Reactor (rear)
6	Player's choice

7.3 Hellbore

D6	Location Front / Rear
1	Tracks
2-3	Drill (front) / Engine (rear)
4	Weapon
5	Hull
6	Player's choice

7.4 Damage Effects

Damage effects are progressive: the first damage to a location applies the first effect, and further damage applies the following effects on the list.

Hull	
1-2	–
3	1 additional damage
4+	2 additional damage

Weapon	
1	Weapon Damaged (Repair on 4+)
2	Weapon Destroyed
3+	Damage to the Hull

Majoris Weapon	
1	–1 To-Hit
2	Weapon Damaged (Repair on 4+)
3	Weapon Destroyed
4+	Damage to the Hull

Leg / Track / Engine	
1	–5 cm of base movement (Repair on 4+)
2	an additional –5 cm of base movement (Repair on 4+) (from this damage, if the titan is destroyed it falls)
3	Immobilised, 1 additional damage
4+	Damage to the Hull

Head / Bridge	
1	–1D6 to AF (Repair on 4+)
2	May receive an order only on a 4+ (Repair on 4+), 1 additional damage
3+	Damage to the Hull

Shield Generator	
1	Damaged. The titan loses its active shields and they cannot be repaired this turn (Repair on 4+)
2	Shield Generator destroyed, all active shields are lost, 1 additional damage
3+	Damage to the Hull

Reactor	
1	1 additional damage (from this damage, if the titan is destroyed it explodes)
2	Shields disabled, 1 additional damage
3+	Reactor severely damaged, 1D3 additional damage

Drill	
1-2	–2 to AF
3+	1 additional damage

9 Infantry

9.1 Artisan

Artisans are builders who design machines, structures, spacecraft, weapons, and other military equipment. An Artisan generally begins any project by examining the records to see whether something similar has already been attempted; if so, the previous plans are used, with an adaptation if necessary. Artisans exercise overall control over the vast workforce of Servitors on a given Forge World.

The Artisan has the **HQ**, **Attached Character**, **Elite (1)**, and **Artisan** abilities. In addition his Graviton Pistol has the **Graviton** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	5+	+1	Attached	Graviton Pistol	20 cm	1	Graviton	-1

9.2 Sicarian Ruststalkers

The Ruststalkers of the Skitarii legions fall upon their enemies in a frenzy. Their transonic blades become a blur as they cut like gladiators' weapons, passing through armour as if it offered no more resistance than a hologram. The Ruststalkers were originally cybernetic assassins, sent across the Red Planet to cut down feral Servitors and undesirables excommunicated by the Cult Mechanicus. They proved so effective that they were reused and organised into groups called killclades. Since then the manufacture of Ruststalkers has spread to every Forge World, and these infantry have been in the front line of many battles.

Sicarian Ruststalkers have the **Infiltration** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
15 cm	5+	+4	6	Blades and Claws	—	—	—	—

9.3 Electro-Priests

Also called Luminen or “sparks of life”, Electro-Priests form sub-orders within the hierarchy of the Tech-Priests. Fanatics of the Motive Force, the third component of the Machine God’s trinity, they believe that all life and all movement are set in motion by that ineffable divinity. The cybernetic grafts practised on the Electro-Priests’ nervous systems allow them to channel electricity into everything their copper-plated palms touch, plunging them into an ecstatic frenzy. At the height of his religious madness, the devotee destroys the enemies of the Machine God with living lightning, or drains their vital energy as a Catachan mega-leech sucks blood.

They have the **Elite (1)** ability. Their Electro-Lance has the **Lance (5+ / AP 0)** and **Reduces Cover (–3)** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	–	+3	5	Electro-Lance	–	–	–	–

9.4 Hastarii

The Hastarii are a vital element for the Skitarii, combining the heavy firepower of far larger machines with armoured cyborg bodies modified to carry such destructive weapons to the front lines. Their right arm is replaced by a gyro-stabilised weapon mount plugged directly into the cortical circuit, giving them a singular accuracy despite the need for advanced dorsal generators, as heavy as they are difficult to manufacture. Hastarii Exterminators are armed with eradication beamers, projecting a short-range cone of atomising energy, while Hastarii Fusiliers pierce vehicles and scramble their systems with precise shots from their neutron lasers. Both variants are highly effective in their dedicated task, but complex and costly to create, so they are rarely deployed when their loss would not be justified.

9.4.1 Hastarii – Exterminators

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	5+/6+f	+2	6	Neutron Laser	45 cm	2	5+	–2

9.5 Combat Engineer

On battlefields torn by war, placing obstacles that slow the enemy while protecting the advance of friendly troops is a precious asset. Some members of the Mechanicus are specially trained and equipped to accomplish these tasks, and some scenarios may give them other functions.

They have the **HQ**, **Elite (1)**, **Attached Character**, and **Engineer** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	5+	+1	Attached	Laspistol	20 cm	1	5+	0

9.6 Logis

The Logis form the corps of logisticians and analysts who indirectly control the resources of a Forge World. They predict future trends and make forecasts based on a plethora of seemingly unrelated factors in order to advise on necessary needs. Within the Adeptus Mechanicus, the Logis are regarded as prophetic figures, and their impartial analysis carries great weight in decision-making.

The Logis has the **HQ**, **Attached Character**, **Elite (1)**, **FO**, and **Master Calculator** abilities. In addition his Graviton Pistol has the **Graviton** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	5+	+1	Attached	Graviton Pistol	20 cm	1	Graviton	-1

9.7 Magos

The Magi are adherents of the Cult of the Machine who have served the Machine God for so long and with such devotion that the greater part of their bodies is now composed of machines. Over decades and centuries of service, a Magos's limbs and organs have been replaced one by one with cybernetic spare parts that do not weaken, never tire, and escape the ravages of time. The further he advances along this path, the more mechanical parts a Magos accumulates. The biological remnant of the oldest among them is finally reduced to a tiny scrap of grey matter, lodged in the depths of their armoured cortex, lost in a mass of cables, ports, and ventilation ducts. As a servant of the Omnissiah progresses in the Quest for Knowledge, he alters far more than his physical appearance. As his body is rebuilt, his mind is modified. Many of them follow such lines of research, setting aside every other consideration, and sometimes spend entire decades cloistered in their laboratories in order to study a remnant of technology from a civilisation long extinct.

The Magos has the **HQ**, **Attached Character**, **Elite (1)**, and **Versatile** abilities. In addition his Grav-gun has the **Graviton** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	4+/5+f	+3	Attached	Grav-gun	45 cm	1	Graviton	-2

9.8 Myrmidon Destructors

Myrmidon Destructors fashion themselves augmetics to carry the heaviest weapons, often made portable only thanks to their reinforced endoskeletons and implanted power systems. These augmentations allow them to create a dense barrage of fire on the battlefield. They specialise in the destruction of the enemy's armoured emplacements and fortifications, and used all manner of esoteric and obscure weapons against which conventional defences offer little protection.

They have the **Elite (1)** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	4+/6+f	+2	5	Volkite Culverin	45 cm	2	4+	-1

9.9 Myrmidon Secutors

Some Tech-Priests are drawn to the path of the Secutor, fascinated as they are by the unique and intellectual challenges that only war can offer. Others may feel drawn by the complexity and beauties of creation and destruction, or by the manufacture of weapons. Tech-Priests may see this path as an end in itself, in protecting the Cult of the Machine, or for other reasons. Whatever their first motivation, these experts in the arts of destruction are invaluable allies for an Inquisitor and make deadly Acolytes. The only drawback to such an association is that the Holy Ordos can never be certain of their loyalty and distrust the dark secrets they may hide.

They have the **Elite (1)** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	4+/6+f	+5	5	Rotor Cannon	30 cm	2	5+	-1

9.10 Skitarii Vanguard

The Skitarii Vanguard, nicknamed rad-troopers, are so steeped in toxic energy that their mere proximity is fatal. During the many civil wars of the Cult Mechanicus, the Vanguard learned to endure these deadly emissions and to make them their weapons. The level of radiation emitted by the Vanguard's equipment is such that it is enough to be near them to feel its weakening effects; being in the same barracks is a death sentence for a non-Skitarii. The Vanguard themselves are theoretically protected under their brigandine, but the rare times they remove their helmets, their missing teeth, their baldness, and their ravaged skin betray the horrible truth. They accomplish their duty with stoicism and in solemn silence, fighting to the last in the name of their mechanical god. The most blessed of the Skitarii pass a threshold called the Crux Mechanicus, when their body is more metal than flesh, and then become Skitarii Alphas. Some reach the rank of Alpha Primus, overseers who operate independently for years if necessary, as solid and reliable as the titanium, steel, and iron that replace their flesh.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	-	+0	6	Radium Carbine	45 cm	1	5+	0

9.11 Skitarii Pilgrims

The Skitarii Pilgrims constitute the original form of the Skitarii, finding their origins in the technological scavenger clans of Mars in the Age of Strife. Drawn from Tech-thralls from various Forge Worlds, as the Skitarii developed, their original personality and body were entirely remodelled. Each Pilgrim is considerably enhanced through cybernetic augmentations and mental reconditioning. These warriors are pilgrims in the literal sense, serving within Skitarii Conclaves as itinerant technological warriors. Each Conclave embodying an aspect of the Cult Mechanicus, the Pilgrims act as light infantry in battle, in squads of eight to sixteen men.

9.12 Pteraxii

The Pteraxii are one of the many specialised castes of cyborg soldiers at the Adeptus Mechanicus's disposal, optimised for agility and instinctive reactions. The Pteraxii's reflexes are heightened by removing cognitive elements that hinder their primary function. Additional joints are implanted at the shoulder blade, along with a pack of thrusters and living reactive surfaces. These flight packs become an integral part of the Pteraxii, who fulfil several roles.

They have the **Jump Packs** ability. Their weapon has the **Reduces Cover** (-3) ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
15 cm	-	+2	6	Phosphor Torch	20 cm	1	4+	0

9.13 Skitarii Rangers

The Skitarii are the infantry of the Adeptus Mechanicus. They are deployed in mass to defend their Forge World, to keep the enemy from approaching the feet of the gigantic Titans, or sent across the galaxy to march in the front line of expeditions that will bring new knowledge back to their Tech-Priest masters. They have been designed for such missions, for augmetics have replaced their flesh — from synthetic synapses to organs made of inflexible steel. Thanks to these intensive modifications, the Skitarii excel in every type of environment. Each legion comes from a hyper-industrialised Forge World: even extreme doses of radiation are nothing to those who have walked such toxic desolations. The Skitarii will stop only once their task is accomplished. Whatever the dangers, the march of the Skitarii never falters.

They have the **Infiltration**, **Camouflage**, and **Sniper** abilities.

9.15 Secutarii

The principal formation of the Secutarii on the battlefield is the phalanx of Hoplites, a defensive force that is augmented and equipped specifically to resist infantry assaults and defy the odds on the most violent and dangerous battlefields. Their strength comes both from their resolute discipline in combat and from the crackling energy barriers generated by their interlocking Kyropatris field generators. The power of these surgically implanted generators is channelled and amplified by their shields, which allow them to resist phenomenal quantities of fire. Their counter-attack is deadly, their Arc Lances being used to set the battlefield ablaze in murderous torrents of artificial lightning. Their inhuman clinical training and cogitator-assisted combat protocols allow them to operate both in dispersed skirmish lines to escort the god-machines, or to advance in close ranks to annihilate resistance.

The Secutarii – Hoplites have the **Dodge (5+)** ability. Their Arc Lance has the **Reduces Cover (-3)** ability.

9.16 Scyllax

These robots are not true combat automata, owing to the absence of a cybernetic cortex, and they could not be classified among Servitors either, for they had practically no organic component. Deployed on the battlefield as elite shock troops or as bodyguards of the Magi, these automata have been equipped with mechadendrites and servo-weapons to dissect living matter at high speed. Equipped with an armoured carapace as resistant as that of Space Marines, armed with a Bolter and claws, and powered by a rad-cell capable of venting harmful radiation, the Scyllax Guardian-automata are a force to be feared.

They have the **Elite (1)** and **Inorganic** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	5+	+3	5	Bolter	45 cm	1	5+	0

9.17 Servitors

The total number of Servitors of a single Forge World generally amounts to tens or even hundreds of millions. Many were once wanted criminals — toughs from every stratum of the Imperium, from hive gangers to agents of the Inquisition who have simply seen too much. Smuggled in during exchanges of raw material between the planets of the Imperium and the Forge Worlds, cargoes of human freight are not rare, and represent another source of flesh that can be put to good use by the Tech-Priests. One begins by erasing the specimen's memory by a chemical lobotomy, so that its personality is no more than a blank page, in theory at least, for it is not rare for residual effects to persist. Then its arms are cut off and replaced with weapons or tools suited to the new role its masters have assigned it. The process is extremely painful — the grafts, the welding of flesh, and the fixing of cables to the muscles are bloody work — but after all, redemption implies sacrifices. And no sacrifice is too great for the Omnissiah.

10 cm	6+	+2	6	Close Combat Weapons	—	—	—	—

9.18 Tech-thralls

A Tech-thrall is a cybernetic servitor created by the Mechanicum at the time of the Great Crusade and the Horus Heresy. These cyborgs were created as needs required, by replacing certain parts of the subject's organic anatomy, central nervous system, and physiology with basic implants. In the case of the Legio Cybernetica, Tech-thralls were generally created from captured prisoners and criminals requisitioned from the local authorities. Considered by their masters as beings of a rank inferior even to Servitors, the ultimate fate of most Tech-thralls was to end their lives recycled into Servitor components, their implants being taken to be used in future thralls, their bodies giving out under the incessant labour to which they were subjected.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	—	+0	6	Stubber	20 cm	1	5+	0

9.19 Tech-Priest

The Tech-Priests are adepts of the Cult Mechanicus. The Imperium's foremost engineers and technological specialists, they accompany almost every branch of the Imperium to maintain its machines. The Tech-Priests provide religious rites, anti-corruption protections, and repairs to the Machine Spirit of every machine they are empowered to oversee. Tech-Priests are often created rapidly in vats, endowed with an instinctive level of knowledge through data-links during their gestation. The members are already born after adolescence and are quickly put to work.

The Tech-Priest has the **HQ**, **Attached Character**, **Elite (1)**, and **Mechanic** abilities. In addition his Graviton Pistol has the **Graviton** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	5+	+1	Attached	Graviton Pistol	20 cm	1	Graviton	-1

9.20 Thallax

The cyborgs of the Mechanicum's Ordo Reductor are heavily reinforced, and the Thallax are distinguished from Skitarii regiments both by their purpose and by the unique degree of their augmentics. The Lorica Thallax that envelops them was developed from the same energy-armour technology that led to the development of the Legiones Astartes' power armour, but to an entirely different purpose. The Lorica encompasses the principal organs, the nervous system, and the brain, but has replaced the skeleton and limbs with armoured mechanical systems powered by an internal reactor heart. The suffering induced by this process, combined with the replacement of the usual human sensory apparatus, proved so traumatic that it required the surgical excision of the centres of pain and emotion, making the Thallax a cold and calculating killing machine, but one that retains a certain independence of human thought, although for some within the Mechanicus this borders on abomination. Conversion into a Thallax is often reserved for Forge Guard, Skitarii fallen in battle, and subjects obtained from more mysterious sources by the unfathomable and sinister Ordo Reductor.

They have the **Jump Packs** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
15 cm	5+	+3	6	Multi-melta	20 cm	1	3+	-2

9.21 Ursarax

The Ursarax are a variant of the Thallax cybernetic troops. Although they fulfil very different roles on the battlefield they are specialists in close combat. They are not simple Automata or mind-wiped Servitors, but true cybernetic Skitarii who retain their sense of initiative and their human personality, their bodies having been considerably augmented by the bionic techniques of the Mechanicum's forge-wrights. Although it was developed only during the second half of the Great Crusade, the design of the Ursarax was rapidly adopted by the Martian Mechanicum.

They have the **Jump Packs** ability. Their Volkite Incinerator has the **Reduces Cover** (−3) ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP

10 Cavalry

10.1 Kataphron Breachers

In battle, Kataphron Breachers charge on the order of their Tech-Priest masters, playing the role of living shield and ram. They were originally designed to break enemy lines and fortifications. As they approach opposing formations, volleys rain down on the Breachers to little effect; the thick overlapping plates that cover their organic components make them resistant to firearms. When their proximity alarm sounds, the Breachers reply with helical discharges from their torsion cannons. While the enemy falls back, the Breachers accelerate and smash the line, crushing and burning with their mechanical, electrified claws. Even if Kataphron Breachers are formidable, they can be easily replaced and gathered by the thousand if necessary. All Forge Worlds manufacture dozens of such warrior constructs every day.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
20 cm	4+	+3	6	Torsion Cannon	30 cm	2	5+	-1

10.2 Kataphron Destroyers

The Destroyer's two forelimbs are replaced with heavy weapons. This configuration allows it to accomplish its role as a mobile heavy-weapon platform, a task it carries out with exceptional efficiency. A cannon of advanced design is mounted on one of its flanks, ranging from the dreaded Grav-cannon, a weapon so powerful that it can flatten even Aeldari wraithbone ghost-constructs in an instant. Every Servitor bears an identification number, and Battle Servitors are no exception. These numbers become their only semblance of identity. Their actions are directed by their limited programming, for only defective Servitors possess a consciousness of themselves. The Kataphron Destroyer's optics are designed to concentrate on the enemy, allowing the construct to identify and eliminate viable targets, but owing to the limits of their programme, many incidents of friendly fire have been recorded.

The Kataphron Destroyer's weapon has the **Graviton** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
20 cm	4+	+0	6	Grav-cannon	45 cm	1	Graviton	-2

10.3 Serberys

It is a great honour to be promoted from the Skitarii manipules into the Serberys corps. They ride swift quadruped constructs that allow them to negotiate the most broken terrain with ease, while the riders are held in place by magnetic locks and gyro-stabilisers.

The Serberys have the **Infiltration** ability. Their weapon has the **Reduces Cover** (−3) ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
20 cm	5+	+3	6	Phosphor Pistol	20 cm	1	4+	0

10.4 Vultarax

The Vultarax is a strato-automata much used by the Mechanicum at the start of the wars of the Horus Heresy. It is a multi-role war engine, heavily armed and fitted with sophisticated sensor equipment that is capable of operating in hostile environments. It proved to be the keystone of the Mechanicum's Explorator Expedition forces, both as a scout and as a rapid-intervention unit in open combat. Their armament, armour, and targeting system make the Vultarax a formidable force on the battlefield. The mechadendrites that emerge from its body can also be transformed into power blades, which makes the Vultarax incredibly dangerous if it decides to remain hovering above its target.

The Vultarax has the **Skimmer** ability. Its weapon has the **Reduces Cover** (−3) ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
25 cm	4+	+2	6	Arc Lance	20 cm	1	5+	−1

11 Walkers

11.1 Sydonian Dragoons

Sydonian Dragoons cross the battlefield like living engravings, bursting from clouds of sacred incense to plunge their crackling lances into the heart of a panicked enemy. They leave behind them only a wake of corpses stretching beyond the horizon. Mounted on the scientific masterpiece that is the Ironstrider walker, Sydonian Dragoons know neither doubt nor rest. The first Sydonians settled in a crater-strewn region of Mars bathed in an acid mist. If the Servitor grafted to each Ironstrider walker is virtually brainless, that is not the case of its rider, who is a seasoned Skitarii.

The Sydonian Dragoon has the **Lance (5+ / AP -1)** and **Infiltration** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
20 cm	5+	+3	6	–	–	–	–	–

11.2 Ironstrider Ballistarii

The Ironstrider Ballistarii mount the same walkers as the Sydonian Dragoons. These machines are capable of crossing the most hostile terrain for years without pause. The single-task Servitor that operates the Ironstrider is often the first component to fail, its battered body finally yielding its last breath. On such occasions, the Ironstrider will continue its crossing until its last recorded destination. It can be repaired only by a Tech-Priest on an anti-grav stretcher, who will excise the dead flesh and replace it while the walker continues its progress. The Ironstrider will then resume its task as if nothing had happened. Thanks to the Heavy Autocannons at its fingertips and the enemy's weak points in its sights, a Ballistarius could fire through the hull of an enemy tank and hit the tank commander in the eye. Indeed, bringing down the enemy's principal vehicles is only a secondary objective compared with hunting its commanders, heretical priests, or xenos warlords, for silencing these leaders sows despair in the opposing army.

The Ironstrider Ballistarii have the **Fire on the Move** and **Infiltration** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
20 cm	5+	+2	6	Heavy Autocannon	45 cm	1	4+	–1

11.3 Magos Dominus on Abeyant

The Magos Dominus is a master of the Legio Cybernetica, of Electro-Priests, and of Servitors. A master in the art of war, he is able to read the battlefield with a talent worthy of a machine. They are often mounted on an Abeyant, a class of hovering vehicles in which the pilot's augmetic and life-support systems are directly connected by bionic links, so that the machine-vehicle becomes an extension of his own body.

He has the **HQ**, **Attached Character**, **Elite (1)**, **Regeneration (5+)**, **Mechanic**, and **Robotics Master** abilities. In addition his Grav-gun has the **Graviton** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
20 cm	4+/5+f	+5	Attached	Grav-gun	45 cm	1	Graviton	-2

11.4 Arlatax

Arlatax-class robots were a type of battle robot used by the Legio Cybernetica during the Great Crusade and the Horus Heresy. A variant of the ancient Conqueror class developed on Xana, its design influenced the Domitar class. Despite its excellent performance as a fast-moving shock unit, it was never widely accepted by the Mechanicum, for it was said that some of its components were not approved by Mars. That made repairs and overhauls difficult, and rumours also circulated that the machine spirit was prone to corruption. However, as the Heresy progressed, these robots were widely used.

It has the **Robot**, **Jump Packs**, and **Reflex Fire** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
20 cm	3+	+5	-	Autocannon	45 cm	1	4+	0

11.5 Castellan

The Castellan is a versatile Battle-automata developed to be used in a wide range of situations on the battlefield. The two Power Fists in the standard configuration make it particularly effective in siege and anti-vehicle roles, and form an effective complement to the heavy armament.

It has the **Robot** and **Reflex Fire** abilities. Its weapon has the **Reduces Cover (-3)** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
15 cm	4+	+5	-	Flamer	20 cm	2	4+	0

11.6 Cataphract

The Cataphract is a heavily armoured Battle-automata designed to be used in almost every combat situation. It possesses a whole range of weapons for various purposes, and although it is regarded by some commanders as suited to everything without having a precise speciality, its versatility in a wide range of roles makes it a highly favoured and popular machine.

It has the **Robot** and **Reflex Fire** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	4+	+2	–	Lascannon	60 cm	1	5+	–1
				Heavy Bolter	45 cm	1	5+	–1

11.7 Colossus

The Colossus is first and foremost a siege Battle-automata; the standard configuration combines a siege hammer to attack fortifications with lighter weapons to use against defending troops. It is widely used by Mechanicum forces as a less costly alternative to the Siege Robot. A few Colossus-class Battle-automata are maintained by the Ordo Reductor of the Adeptus Mechanicus, mainly to test new and experimental siege weapons.

The Colossus has the **Robot**, **Reflex Fire**, and **Damages Buildings (AP –2/1) in assault** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
15 cm	4+	+4	–	Multi-melta	20 cm	1	3+	–2

11.8 Conqueror

The Conqueror Battle-automata is designed to be used on the battlefield in situations where strong armed resistance is expected. A major point of its design is the balance and combination of firepower with heavy armour. It is widely used in assaults and the elimination of vehicles and Dreadnoughts.

It has the **Robot** and **Reflex Fire** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	4+	+4	–	Heavy Bolter	45 cm	1	5+	–1
				Autocannon	45 cm	1	4+	0

11.9 Domitar

The last type of battle robot to enter production within the Mechanicum before the Horus Heresy, the Domitar was a variant of the sophisticated ancient Conqueror-class robot. More imposing than the Castellax class alongside which it would serve, the Domitar was also faster, designed to cross the battlefield at high speed and break through enemy positions. To that end it was given a heavily armoured, shock-resistant chassis and is equipped with grav-hammers. As a line-breaker, the Domitar was without equal in the Mechanicum's arsenal, and its tactical flexibility was further reinforced.

It has the **Damages Buildings (AP -4/1)** in **assault** and **Robot** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
15 cm	3+/5+f	+5	–	Grav-hammers	–	–	–	–

11.10 Thanatar

The Thanatar is a heavy Siege-automata, designed as a mobile artillery platform rather than as a general combat unit. It is armed with a Hellex-pattern plasma mortar, a terrifying weapon capable of launching dense spheres of flaming plasma on arcing trajectories over defensive barriers and into the heart of enemy fortifications, incinerating everything within its blast radius with a liquid tide of solar fire. The Thanatar's chassis, built to house the enormous weapon and the power systems and fuel reserves needed to feed it. Its structure is also heavily reinforced, both to withstand the firing stresses of its main weapon and to protect it against external attacks. Unlike many other Battle-automata produced to add the Mechanicum's power to that of the Great Crusade, the origins and lineage of the Thanatar pattern remain uncertain.

The Thanatar has the **Robot** ability. Its weapon has the **Reduces Cover (-1)** and **Artillery** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
10 cm	3+	+2	–	Plasma Mortar	60 cm	1	3+	-1

11.11 Thanatar Calix

The Calix-class Thanatar is said to have been developed by the Sollex Myrmidon and Omega-Shevar alliances of the Ordo Reductor alongside the Legio Cybernetica, and to combine in a single weapon the deadly technologies of those three factions. Calix-class Thanatars are intended for the vanguard of assault warfare, able to break the strongest fortifications and carry out targeted strikes to neutralize defensive strongpoints. Its principal weapon is the Sollex Heavy Lascannon, and these engines are so precious that, in the rare cases where they are deployed, many other lesser combat automata are deployed to protect them.

The Thanatar Calix has the **Robot** and **Reflex Fire** abilities. In addition its Grav Ram has the **Graviton** and **Damages Buildings (AP -3/1)** abilities.

10 cm	3+	+3	-	Grav Ram	20 cm	1	Graviton	-2
				Lascannon	60 cm	1	5+	-1

11.12 Vorax

The Vorax are hunter-killer units, Battle-automata created from the ancient and venerated Crusader pattern, which is said to date back to the Dark Age of Technology and can be found on all the great Forge Worlds of the Imperium. Created on pre-Imperial Mars to fulfil both the roles of weapon of destruction and exterminator of malevolent machines and mutant vermin, their Cybernetica cortex engrams are known to be particularly predatory and vicious examples. The bestial instincts that sleep in their bodies of steel and ceramite are such that many commands are built into their control programming to prevent these tireless hunting machines from becoming like the renegades they attack in the shadows of Mars's great forges. Sometimes they are also sent by their masters to cut down surplus populations in times of famine or plague, their hunts stopping and their guns falling silent abruptly. It is therefore no surprise that the Vorax are superstitiously feared by the indentured workers of the Mechanicus's distant domains and by neophyte adepts of the priesthood of the Omnissiah.

The Vorax has the **Robot** and **Reflex Fire** abilities.

35 cm	4+	+1	6	Heavy Stubber	30 cm	2	5+	0
				Tectomagnetic Bombs	Bomb	1	4+	-2

12.2 Archaeopter Stratoraptor

Archaeopter Stratoraptors saturate the enemy with fire from their terrifying array of armaments. The Stratoraptor takes advantage of the Archaeopter's vector nozzles and variable-wing profile to excel in the ground-attack role. Its panel of heavy weapons, which mixes high power and a high rate of fire, guarantees that the Stratoraptor is a deadly danger to entrenched infantry and armour alike.

Its Phosphor Blaster has the **Reduces Cover (-3)** ability. The Archaeopter Stratoraptor has the **Floater** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
35 cm	4+	+1	6	Phosphor Blaster	20 cm	1	4+	0
				Twin Lascannon	30 cm	1	4+	-1
				Heavy Stubber	30 cm	2	5+	0

12.3 Archaeopter Transvector

The ancient design of the Archaeopter was judged holy enough to fulfil secondary roles. Archaeopter Transvectors carry out exploration tasks, ferrying agents behind enemy lines or into the heart of battle. An ideal aerial transport, the Transvector is employed in numbers in Exploration fleets for reconnaissance and rapid extraction in hostile environments. They are incredibly agile, their implanted pilots able to alter the shape of the wings according to atmospheric conditions, while controlling their Cognis heavy stubbers to scythe down approaching enemies.

The Archaeopter Transvector has the **Floater** and **Transport (2)** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
35 cm	4+	+1	6	Heavy Stubber	30 cm	2	5+	0

12.4 Skorpilus Disintegrator

Skorpilus Disintegrators are swift assault tanks bristling with heavy weapons. As individual support vehicles or gathered in waves of dozens of elements, Disintegrators have a high rate of fire. Salvos of missiles lift off in pre-programmed waves, and the clatter of reloading is heard even before the first detonations. The tanks' principal armament can vary. Some carry a Belleros Energy Cannon, whose projectiles are propelled by the same gas as the vehicle, superheated and reinjected; they explode on impact in a ball of spectroscopic energy.

The Skorpilus Disintegrator's missile launchers have the **Artillery** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
25 cm	4+	+0	6	Missile Launcher	75 cm	2	4+	0
				Belleros Energy Cannon	60 cm	1	4+	-1

12.5 Karacnos

The Karacnos assault tank is a type of tank used by the Adeptus Mechanicus. It is a variant of the Triaros armoured carrier dedicated to assault operations. Its transport compartments have been replaced with heavy weapons, notably the Karacnos's mortar battery. This mortar fires radioactive warheads designed to sweep an area of all organic life. The vehicle was also equipped with Hunter-Killer missiles and was protected both by heavy armour and an ion shield.

Its Radiation Mortar has the **Template (12 cm)**, **Battery**, **Reduces Cover (−1)**, and **Artillery** abilities. It also has the **Protection (4+) to the front** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
20 cm	2+	+2	6	Radiation Mortar	75 cm	Template	4+	0
				Lascannon	60 cm	2	5+	−1

12.6 Krios

A pattern originating from Mars, the Krios uses many integrated systems well beyond the reach of most STC construction or maintenance facilities. Thus, despite its age and proven existence in the Mechanicum's arsenals, it has never served outside the Taghmata and the Skitarius. Comparable in many respects, in terms of function and tactical role, to the Predator Tank more widely used by the Astartes, it does not have a flexible turret mount for its principal armament. Unlike more conventional armoured vehicles, its durability is assured by interlocking defensive energy fields (and in some cases by powerful anti-missile shield generators) rather than by physical armour, which gives it a deceptive appearance.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
15 cm	3+	+2	6	Lightning Cannon	75 cm	1	4+	−3

12.7 Krios Venator

This variant of the Krios adapts the tank into a powerful anti-personnel firing platform by replacing its Lightning Cannon with a Pulsar-Fusil. This ancient and complex weapon system is a relic of the Dark Age of Technology, and its secrets are jealously guarded by those who possess them. It is a multi-chamber particle-beam cannon designed to fire volleys of destructive energy bolts that explode on contact with their target, tearing armoured vehicles apart by repeated strikes.

Their Pulsar-Fusil has the **Damages Buildings (AP -5/1)** ability.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
15 cm	3+	+2	6	Pulsar-Fusil	75 cm	1	3+	-1

12.8 Macrocarid Explorator

The Macrocarid Explorator was a class of heavy vehicles used by the Mechanicum during the Great Crusade and the Horus Heresy. The term itself designated a classification of heavy, armoured, fully sealed vehicles used by the Magi for combat, command, and exploration. In the early years of the Crusade, the Land Raider Proteus was the most common type of vehicle, but as the Imperium expanded, Macrocarids became increasingly widespread. The Macrocarid Explorator is still used in M42, notably by the Forge World Metalica.

It has the **All-Round Armour** and **Transport (2)** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
20 cm	2+	+2	6	Twin Heavy Lascannon	60 cm	2	4+	-2
				Volkite Culverin	45 cm	1	4+	-1

12.9 Onager Dunecrawler

The Onager Dunecrawler of the 41st Millennium is still fitted with powerful armament, and the miniature fusion reactor on its back means that it possesses a longevity superior to the most robust vehicles of the Adeptus Astartes. Its weapons are linked to data-banks that record its successes until they become a bloated tick. It exists in three versions, equipped with an Icarus Array, a Heavy Grav-Cannon, or a Heavy Phosphor Blaster. The Phosphor Blaster and Grav-cannon versions have their weapons on Turret. The Icarus Array has the **AA INC** ability. The Heavy Grav-Cannon has the **Graviton** ability. The Heavy Phosphor Blaster has the **Reduces Cover** (–3) ability. All three versions have the **Walker** ability.

12.10 Onager Dunecrawler Scout

The Onager Dunecrawler Scout houses two crew members who share a symbiotic relationship with their Onager. The gunner is a Skitarii Ranger, whose formidable aim is improved by a panoply of autosenses. The driver is a Skitarii Vanguard, his resistance to radiation allowing him to immerse himself in an electro-amniotic tank that offers him a direct link with the machine spirit. These drivers are used as simple batteries because they are easily replaceable; it is enough to insert a new Vanguard into the electrode-filled soup to confer on the Onager a new period of life. The Skitarii crew accept their fate without complaint, for serving the Machine God is reward enough.

Its Eradication Beamer has two possible firing modes and it may choose one per turn. Both firing modes have the **Turret** ability. The Autocannon also has the **Turret** ability. The Onager Dunecrawler Scout has the **Infiltration** and **Walker** abilities.

12.11 Skorpilus Dunerider

The seismic tumult of roaring engines and the wreaths of fluorescent smog announce the deployment of a Forge World's tanks and hover transports. A cushion of hyper-reactive gas pushes these angular war engines above dangerous terrain, while the pressure under their chassis flattens the earth. Most Forge Worlds are toxic dumps — the result of millennia of industrial overproduction — and the Skorpilus vehicle was developed to cross the acid marshes of those planets. Under a pressurised hood of reinforced nanofibre, an alchemical gas is atomised by half-forgotten processes, creating the impulse and spitting a swirl of smoke.

The Skorpilus Dunerider has the **Transport (2)** and **Attached Transport** abilities.

Movemen	Save	AF	Morale	Weapon	Range	Dice	To-Hit	AP
25 cm	4+	+0	Attached	Heavy Stubber	30 cm	2	5+	0

12.12 Termite

A specialised transport vehicle, the Termite is capable of deploying a complete platoon of warriors on the battlefield while bypassing enemy fortifications and sentries. It is able to dig tunnels rapidly through the densest materials at speeds comparable to those of surface transport engines, thanks to its mill which uses a set of flux-cutters and phase-shield generators to aid its progress. Once at its target location, it emerges on the surface, or even directly into the lower level of macro-fortifications, scattering nearby enemies with its fusion cutters before disgorging its deadly cargo.

It has the **Deep Strike (2)**, **Attached Transport**, and **Transport (2)** abilities.

15 cm	4+	+1	Attached	Autocannon	45 cm	1	4+	0

12.13 Triaros

The Triaros was the principal armoured transport of the Mechanicum Taghmata on the battlefield at the time of the Great Crusade and the Horus Heresy. Drawn from the most common STC patterns, it relies on a number of unique technologies held as arcana by the Autokrator Magos and which have never been disclosed for wider Imperial use, even for the Legiones Astartes. Designed to be used in hostile environments, it incorporates multiple galvanic traction systems, and its defences consist not only of raw protection but also of several layers of techno-canticle armour and energy shields, particularly around its seemingly exposed control platform, as well as independently animated weapon Servitors. Its large storage bay can be hermetically sealed if necessary, allowing the Triaros to be used in hard vacuum and on the surface of lifeless worlds. Its internal bay is equipped with numerous specialised fittings for recharging, cold-storage, and the maintenance of technical installations and light automata as needed. Its most remarkable feature, however, is a powerful reactor-powered shock ram mounted at the front, which can be used to smash and incinerate anything it touches.

The Triaros may transport Robots (which count as 2 bases as usual). It has the **Transport (4)**, **Attached Transport**, and **Protection (4+) to the front** abilities.

13 Super-heavies

13.1 Ordinatus Minoris

The legendary macro-machines of the Centurio Ordinatus are rare and truly obscure weapon systems, of staggering power, ranging from the unique and colossal Ordinatus Primaris, such as Mars and Endymion, to the smaller but still gargantuan Ordinatus Minoris, such as the Ulator, Sagittar, and Urkallac classes, which nevertheless remain among the most powerful war machines available to the Imperium. Although they are not truly unique, like the war machines of the Ordinatus Primaris, the Minoris macro-machines were still rarer than the Battle Titans of the Titan Legios, and only a handful of Forge Worlds had the resources or even the doctrinal blessing and religious authority to produce or maintain such incarnations of the Omnissiah's divine wrath. There are four versions of the Ordinatus Minoris.

The Grav-cannon version is equipped with a Graviton Destroyer that has the **Graviton** and **Damage (+1)** abilities.

The Multiple Rocket Launcher version is equipped with a Multiple Rocket Launcher that has the **Artillery** ability and two firing modes. It may choose between each of the two modes each turn. The Penetration mode has the **Reduces Cover** (−1) ability, while the Saturation mode uses a **Template (12 cm)**.

The Quake Cannon version is equipped with a Quake Cannon that has the **Damages Buildings (AP −4/3)** ability and uses a **Template (7.5 cm)**.

All versions have the **Wounds (2)** and **DR (6+)** abilities.

13.2 Mole

The Mole is an intermediate-sized tunneler able to transport up to 60 men from underground and emerge in the heart of the enemy ranks to pour troops as close as possible to the fighting. Once it has come out of the earth, it can bring fire support to the disembarked troops thanks to its medium-range armaments.

Its Multiple Launcher has the **Artillery** ability. The Mole has the **Attached Transport**, **Deep Strike (2)**, **Wounds (2)**, and **Transport (12)** abilities.

14 Praetorians

14.1 Hellbore

The Hellbore is a gigantic tunneler able to transport several Adeptus Mechanicus infantry detachments, which can completely change the course of a battle.

The Multi-Launchers have the **Turret** and **Artillery** abilities, and fire twice per turn. The Heavy Assault Cannons have the **Turret** ability.

The Hellbore has the **Wounds (5)**, **All-Round Armour**, **Deep Strike (2)**, **Transport (25)**, **Damage (+2)** in assault, **Hellbore Emergence**, and **Damages Buildings (AP -5/2)** in assault abilities.

15 cm	2+ / Sheet	+12	-	Multi-Launchers	45 cm	4	4+	-1
				Heavy Assault Cannons	20 cm	6	5+	-1

14.2 Ordinatus Armageddon

The Ordinatus Armageddon first spilled blood during a massive Chaos attack attempting to invade the planet of the same name. Khorne Banelords, terrible Battle Titans, and Daemon Engines destroyed many cities, but a great genius of the Adeptus Mechanicus, Geronimus Undersen, modified an Ordinatus as a means of defence against the enemy war machines. Undersen mounted an enormous spacecraft weapon on a terrestrial chassis, thus giving the Imperial Guard an engine whose power was capable of destroying the most heavily armoured enemies. In the battle that followed for control of Hive Tartarus, Armageddon destroyed no fewer than four Chaos Titans and two detachments of Daemon Engines. Deprived of the firepower of those engines, the Chaos assaults broke against the walls of Hive Tartarus. The Ordinatus Armageddon is feared, and its reputation is that of a machine able to bring down any opposition.

The Powerful Shot of the Nova Cannon has the **Damage (+3)** and **Damages Buildings (AP -5/2)** abilities. The Diffuse Shot of the Nova Cannon has the **Damage (+1)** ability. The Ordinatus Armageddon has the **DR (6+)**, **Wounds (5)**, and **Energy Shields (4)** abilities.

				Nova Cannon – Burst	90 cm	8	4+	-1
				Twin Lascannons	60 cm	4	4+	-1

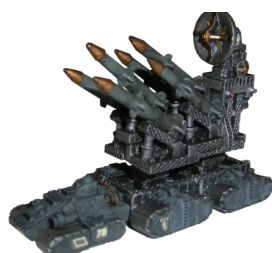

14.3 Ordinatus Golgotha

After the crushing defeat Ghazghkull Thraka suffered on Armageddon, he set off again towards the stars. His sworn enemy, Commissar Yarrick, pursued him to the world of Golgotha. The Commissar was captured, and in order to humiliate his relentless enemy, Ghazghkull did not kill him, but decided to imprison him. That was without counting on Yarrick's inexhaustible resources; he managed to escape and later returned to Golgotha accompanied by a punitive force. The first combats were unfavourable to the Imperium, whose armies were overwhelmed by the multitude of Orks. In an attempt to crush the immense mobs, the Ordinatus Golgotha was constructed. Golgotha's terrifying Hellfire Missiles devastated the Ork ranks. The latter were routed and driven from the world. Since then, the Ordinatus Golgotha has been seen on every front, in battles fought against enemies in numerical superiority.

This Ordinatus carries 6 Hellfire Missiles and may fire one or two per turn. The Hellfire Missiles use a **Template (12 cm)** and are **Artillery**. You may fire only 6 missiles per game. The Ordinatus Golgotha has the **Wounds (5)**, **Energy Shields (4)**, and **DR (6+)** abilities.

15 cm	2+ / Sheet	+7	-	Hellfire Missiles	150 cm	Template	3+	-1
				Twin Lascannons	60 cm	4	4+	-1

14.4 Ordinatus Mars

During the Horus Heresy, the worlds of the Adeptus Mechanicus were torn by civil war. The rebel armies, led by Magos Solomon Abbadon, turned against the Emperor in order to overwhelm the masters of Mars. From his citadel of Jericho in the mountains, he sent his forces to attack the factories and installations of those who had remained loyal to the Emperor. The Imperium organised reprisals and dispatched an armada to annihilate Abbadon's worshippers. This proved impossible, for the fortress of Jericho was protected by an extraterrestrial energy system discovered during the Great Crusade. The central bastion was built of the hardest metal and could withstand the most violent bombardments. The Ordinatus Mars uses a unique technology to produce a sound wave that reverberates across the whole battlefield. When that vibration struck the walls of fortress Jericho, they began to tremble and fell to dust. The infamous metal tower toppled and collapsed like vulgar paper. Thousands of techno-guards charged through the breach, and Solomon Abbadon was captured and immediately executed for his treachery.

The Ordinatus Mars uses a Sonic Disruptor that uses a **Template (Flamer)**. Place the template at range and in line of sight of the Ordinatus, with the point of the template directed towards the Ordinatus. Bases are then hit on a 3+ with no save, with the **Reduces Cover (-3)** and **Damages Buildings (AP -4/2)** abilities. It has the **Wounds (5)**, **Energy Shields (4)**, and **DR (6+)** abilities.

15 Light Titans

15.1 Warhound Titan

Warhounds form the smallest class of Titans. They are the eyes and ears of the Titan Legios and, during campaigns, range ahead of the main groups. Faster and more agile than Reavers or Warlords, they lack their armour and firepower, however. Like all Princes, Warhound commanders perceive and react through their Titan's control sensors and neural links. Their daring is proverbial. Warhounds often operate in pairs, so that they can outpace and outflank larger Titans they may encounter. In a major engagement, Warhounds operate on the flanks and seek to engage enemy tanks and infantry rather than other Titans, where their Vulcan Mega-Bolters, Inferno Guns, and Turbo-Lasers (all lighter Titan weapons) can still inflict immense damage.

The Warhound Titan must buy 2 weapons. It has the **DR (5+)**, **Wounds (4)**, **Extended Coherency (25 cm)**, **Energy Shields (2)**, and **Agile** abilities.

25 cm	2+ / Sheet	+10	–	Multi-Laser	20 cm	2	4+	0
				Choose 2 arm weapons	–	–	–	–

16 Line Titans

16.1 Reaver Titan

The Reaver is a very old Titan pattern, and if it is not as heavily armed as the Warlord (which forms the backbone of the Titan Legios' Battle Titans), or as fast and agile as the Warhound, it remains a powerful war machine in its own right. It is protected by thick adamantium armour plates and endowed with devastating firepower. Like its larger cousin, the Reaver is regarded as a god-machine of destruction, an incarnation of the Machine God's power, thrice blessed by the Tech-Priest of the Adeptus Mechanicus before committing to battle. Each Reaver is commanded by a Princeps, who is connected directly to the Titan's Cerebral Impulse Unit. He is assisted by two crew members, holding the rank of Moderati, who control the Titan's movement and weapons. The Reaver's power source is its plasma reactor, which is maintained by a Tech-Priest who carefully manages the Titan's available power supply and is in turn assisted in his complex task by Servitors connected directly into the Titan's systems. The Reaver comprises three weapon mounts. Its carapace weapon is the equivalent of a smaller Warhound-sized weapon, while its arms carry the heavier weapons — up to Warlord size. The largest Titan weapons, such as Quake Cannons, are still beyond a Reaver's load capacity. The Mars pattern is said to be the oldest Titan archetype still in service, its origins even preceding the Great Crusade.

The Reaver Titan must buy three weapons (two arm weapons and one carapace weapon) and may buy 1 Banner option and 1 Head. It has the **Wounds (6)**, **DR (5+)**, **Damage (+1) in assault**, and **Energy Shields (4)** abilities.

				Twin Heavy Stubbers	45 cm	2	5+	—1
				Choose 3 weapons (optional: 1 Banner option and/or 1 Head)	—	—	—	—

16.2 Warbringer Titan

The Warbringer Nemesis Titan is an immense war machine. It is designed to destroy enemy Titans at range and to serve as a fire-support platform. It sits between the more common Reaver and Warlord classes. Its mass and firepower often place it on the front lines of the battlefield alongside the various classes of Battle Titans. Its defence batteries protect it adequately against aerial attacks. Within the Titan Legios, it has the reputation of having a restless Machine Spirit. Sensor artefacts and other aberrant phenomena are commonplace aboard such a god-machine. The Tech-Priests who serve these machines praise the complex mysteries that led to this creation, and many among the Magi of the Machine God consider it an honour to be assigned to such a machine. The Warbringer Titan must buy two arm weapons and choose one carapace weapon (either a Volcano Cannon or a Quake Cannon, the cost of the dorsal weapon already being included in the Titan's cost) and may buy 1 Head. The Cerberus Cannons have the **AA** ability. The Warbringer Titan has the **Wounds (7)**, **DR (5+)**, **Damage (+1) in assault**, and **Energy Shields (5)** abilities.

16.3 Warlord Titan

The Warlord Battle Titan has always been the heart of the Titan Legios; indeed its design predates the Imperium itself. Some Warlords have been in service since the Dark Age of Technology, and many others date from the Age of Strife. These ancient war machines are carefully preserved and maintained by the Tech-Priests, so that energy still surges through their powerful limbs when the correct litanies are performed. The Warlord is a heavy Titan intended to fight on the most active front lines. It is protected by six Shield generators and one of the thickest armours that can be seen on a Battle Titan. The Warlord can mount up to four independent principal weapon systems and several secondary weapon systems to increase its short-range firepower. The great longevity of the Warlord Titan has led to a plethora of specialised equipment designed for it. Some Titan Legios are almost entirely composed of Warlord Titans equipped with siege-warfare devices and are used only to demolish fortresses and cities that resist the Emperor's will.

The Warlord Titan must buy four weapons (two arm weapons and two carapace weapons) and may buy 2 Banner options INC and 1 Head. The Warlord Titan has the **Wounds (9)**, **DR (5+)**, **Damage (+1) in assault**, and **Energy Shields (6)** abilities.

17 Off-Table Artillery

Off-Table Artillery may represent long-range weapon batteries deployed well away from the combat zone, or orbital or naval artillery. See the rulebook for more details on their use.

A Fragmentation Barrage uses a **Template (12 cm)** and has the **Reduces Cover** (−1) and **Off-Table Artillery** abilities.

A Macro Barrage uses a **Template (7.5 cm)** and has the **Damages Buildings** (AP −4/3), **Off-Table Artillery**, and **Reduces Cover** (−2) abilities.

A Laser Lance has the **Damage** (+1D3) and **Off-Table Artillery** abilities.
